Website Launch Checklist

</div>

- [ ] **Check your spelling and grammar on every page of your site.**

  There are several free online spell and grammar checkers available. Or you can copy/paste the text into Word or Grammarly and check each page individually. Paid services are also available such as Respelt.

- [ ] **Check your site in multiple browsers and on mobile devices.**

  It's best to test these manually, but you can also try a paid service such as Cross Browser Testing.

- [ ] **Test your links.**

  There are several programs available for free. Chrome has an extension for this called Broken Link Checker or try Online Broken Link Checker or W3C LinkChecker.

- [ ] **Check to be sure all images have Alt text descriptions.**

- [ ] **Manually test any forms on your site.**

- [ ] **Check your 404 pages.**

  It is best to have a custom 404 error page. You can check your error page by typing in a non-existent page to your browser window to get on a 404 error page.

- [ ] **Check your 301 redirects.**

  If you created a whole new URL structure, you'll want to create 301 redirects for pages that changed and test to make sure they redirect as expected.

- [ ] **Check your XML site map and make sure it is rendering correctly.**

- [ ] **Test your social media icons and make sure they are taking your site visitors where you want them to go.**

- [ ] **Point your DNS at your new hosting name servers.**
